Andy Cornelissen

CS Philosophy Statement

The Computer Science Industry as a whole is a very diverse field. In such a broad field it is hard to determine where one's true talent and interest lies. For the last eight months I have been part of an IT Team with Georgia Pacific and discovered a lot about how I think I fit into the field. What I have enjoyed the most about my job is the wide variety of work one can do in a single position. Through my education at St. Norbert College and working at my current job I have learned the value of working as part of a team toward a common goal. I enjoy working in groups and attempting to develop strategies. I also enjoy working with people in general. For example I see great value in creating software and then having a close working relationship with those who are using your software. I have also learned the importance of knowing and understanding Computer Science theory. The division of computer science that interests me the most is developing and designing theory and than enacting that theory in a real world environment.
