

Exceptions in CCR Vision

by: Josh Domina

Does not do web reporting

I ran out of time to implement this. Ideas on how to do this are discussed in extensions.

Does not parse switches

The ParseTrack() function cannot handle switches as it stands. I had problems going out to check a switch and ending in an infinite loop. This was due to the same sections of track being reached by link and the parse function checking them over and over. This only occurred when a switch was followed. I was unable to fix this problem so it was removed from the code.
