

VB Interface

Task #	Task & Description	Priority Rank	Difficulty	Date Completed
1	Course Management	1	3	3/4/2009
	When Carole adds a class and reloads, it doesn't show up. For classes that are not there, she is making connections between students and tutors for a similar class but not the actual class.			
	Comments: Probably will need some time with Rappel to understand what the Course Management feature is doing. Need to better understand what is broken with the feature.			
2	Class Selection	3	6	4/2/2009
	When Carole is selecting a class, she has to scroll through all of the available classes to get to what she wants.			
	Comments: Add an auto-complete text input field when searching			
3	Tutor Schedule	2	2	3/17/2009
	Carole wants better access to tutor's schedule. She doesn't want them putting openings for six different classes, if they only have two hours available. She wants to put the classes that they are "best" at in coordination with their available time.			
4	Timeout	7	1	3/17/2009
	Carole says that if she leaves it open for very long, it locks up, and she has to close and reopen. She likes to leave the system open but minimized all day, so she has quick, easy access to it.			
	Comment: Add refresh capability to reconnect with the database either on a timer or on the click of a button.			
5	Pictures	4	5	4/2/2009
	Carole would like to add a box that shows the tutor's picture. This would be used to jog her memory, and if the tutee knows the tutor, they will see the picture at their meeting with Carole.			
	Comment: Very cool feature that ranks in the middle with both priority and difficulty. Have to find a way to store pictures and create a method for Carole to upload them.			
6	Deleting Connections	5	7	3/5/2009
	Carole wants to be able to delete all connections at the end of the semester. Right now, she has to go into each tutor and delete each connection individually.			
	Comment: Quick fix - add "End of the Semester" button to confirm delete of every record in the Connection table			

VB Interface

7	Showing Professors	6	4	3/17/2009
	<p>When assigning a tutor, Carole clicks a class first. This brings up a screen that shows all the tutors who have clearance or recommendation to tutor that class. At this screen, if she clicks a tutor, it goes back to the main interface and shows all the tutor's information. However, she would like to know which professor the tutor had before progressing to the next screen. The next screen shows the professor, but if she wants</p> <p>Comment: This is actually relatively easy since the CourseListing table (tells us what tutors can tutor in) already has two prof fields (primary and other). Just would need a place to display the profs for that tutor's course.</p>			

Extra Requests

8	Printing Quick Search			4/2/2009
	Carole wanted to be able to print the results of the quick search, and she wants the printout to be exactly like how she sorts the information on the form.			
9	Modules			4/4/2009
	Carole wanted the ability to keep track of which modules the tutors have completed. This will require the ability to input and delete dates for each module.
