Philosophy

As the world is constantly evolving, our dependency on technology becomes greater. The more advanced it becomes, the more efficiency we see in our lives. Throughout my life I have watched the evolution of technology from the Nokia cell phone to the iPhone, the VCR to Netflix, and even the Gameboy to virutal reality goggles. As a software developer, I have the privilege of taking part in this constant change. By joining in on this progression, I have taken on the responsibility to always be learning and keeping up with the pace of these advancements.

Career Plans

After graduation, I will become a full-time software developer at Systems Control in Iron Mountain, MI.
