UPLIFT

Definition & Requirements

now

Definition: Create a mobile app that offers uplifting and positive words and inspirational sayings.

Requirements:

1. Primary feature that fills in the blank: YOU ARE ____ with uplifting, positive words, phrases, quotes, or maybe photos.
2. Offer different themes or backgrounds, fonts, borders...
3. Set up times to get notifications or make it random.
4. Design a browse feature for the dictionaries or have it select items randomly.
5. Needs the ability to select/unselect from existing lists of inspirations. Make it very easy to insert new quotes and words of inspirations.
6. Share quotes and inspirations with friends or save as screenshot.

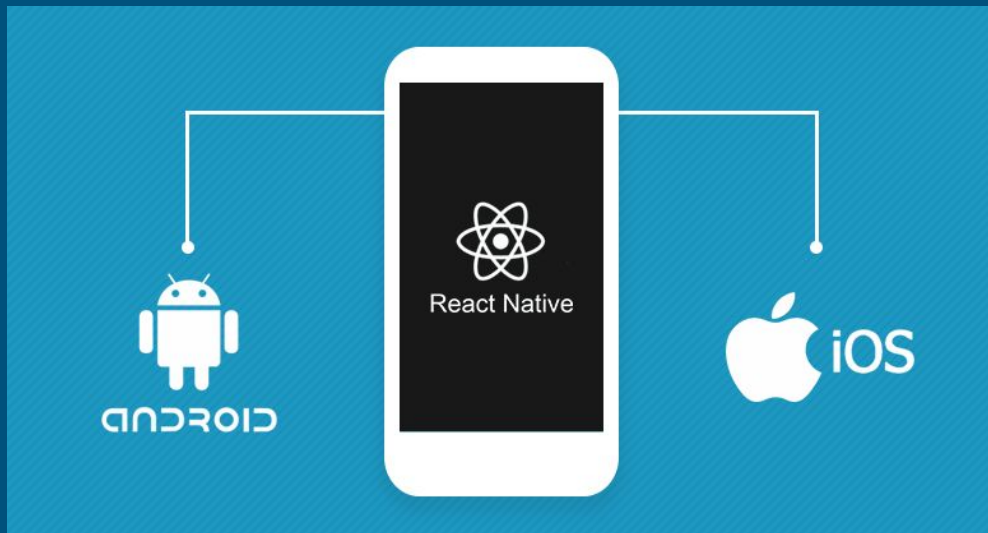

UPLIFT

React Native

now

- Mobile application framework
- Created by Facebook
- Cross-Platform
- XCode/Sublime

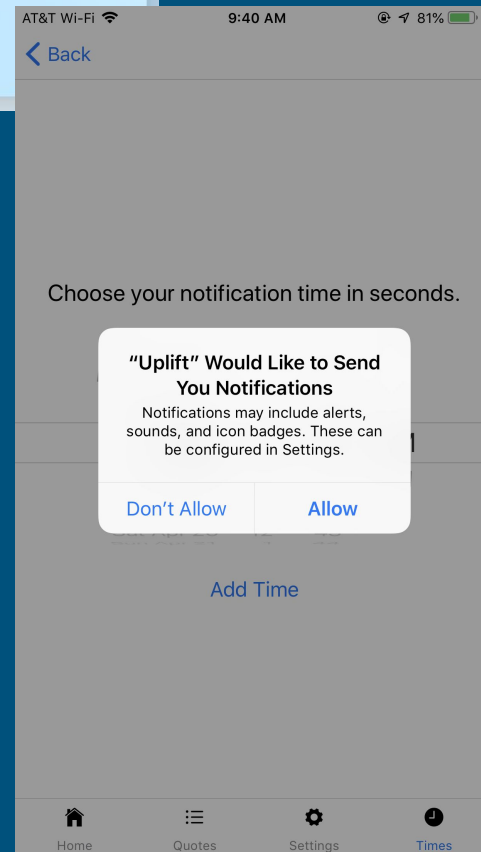

UPLIFT

Solutions

now

- Mini Projects
 - Get Notifications to work
 - Navigations
- Apple Developer Account
 - (Thank you, Derek Harrington)
- Layouts
- MySQL Database

UPLIFT

Exceptions

now

- Browse feature for dictionaries
- Screenshot image of quote
- Allow notifications to send on specific day

Challenges:

- React Native...
- Layouts...
- Wifi...

I've got the same issue as well. Exactly the same code, **same iPhone and MacBook** do work fine at **work** but I am getting the above issue when I am **at home**. Note that everything was working fine last night at home.

So I guess there's probably something wrong with my router? Also last night I updated the Command Line Tools (just in case it helps).

Updates Installed in the Last 30 Days

Command Line Tools (macOS Sierra version 10.12) for Xcode

Version 9.0
Installed Sep 21, 2017

The Command Line Tools enable UNIX-style development via Terminal by installing command line developer tools, as well as macOS SDK frameworks and headers. Many useful tools are included, such as the Apple LLVM compiler, linker, and Make. If you use Xcode, these tools are also embedded within the Xcode IDE.

Update: I can confirm that if I use my phone's Personal Hotspot (WiFi) everything work fine. So it is definitely my modem/router that is causing the issue - weird since I did not change anything since last night.

Update 2: After lots of investigation (I still haven't solved this issue), the Android version works fine. It is only iOS that has this problem (the simulator works fine - the problem is with the device). I've also tried with another MacBook (fresh installation of Mac OS) and latest XCode etc. I can also confirm that the same thing is happening with a fresh RN project! So still looking... Any ideas, more than welcome!
