## Quick guide:

## $\textbf{CapstoneEventMusicEditor.DataAccess}: database \ connectivity \ and \ commands$

• Table definitions are also in user doc

\_\_\_\_\_\_

## CapstoneEventMusicEditor.UI: User Interface

#### \*\*\* these are all just part of the framework I did not write them

Path	File Name	Description
/	Bindable Base	this class implements inotifypropertychanged interface and allows properties to
		be set
	ContainerHelper	sets instance of view model (implemented in MainWindowViewModel.cs)
	RelayCommand	binds relay commands from the view models so you dont have to write code in
		the views to do so
	ValidatableBindableBase	this class implements inotifypropertychanged interface and bindable base to
		allow validation checks on the class inbetween the database and front end

## \*\*\* still part of the framework however contains some of my code (not overly exciting)

Path	File Name	Description
/	MainWindow.xaml	The window all the views are displayed on driving view model all view changes
	MainWindowViewModel.cs	route through this application

#### \*\*\* start of actual code

Path	File Name	Description
/Songs	AddEditSongView.xaml AddEditSongView.xaml.cs AddEditSongViewModel.cs	Add, edit, or delete a song
	EventsView.xaml EventsView.xaml.cs EventsViewModel.cs	Set leds lights to particular segments of the song
	SimpleEditableSong.cs	Class that is for validation when retrieving data from ui ( the user is required to have a song name and a path to the song)
	SongsSearchView.xaml SongsSearchView.xaml.cs SongsSearchViewModel.cs	This contains the search all songs ui as well as the music player ui

Path	File Name	Description
/EventEditor	EventPlayer.cs	Functions and variables for playing an event with songs

Path	File Name	Description
/Data	PlaylistQueueService.cs	Where the playlist is/ all manipulation functions for it
	Session Variable Service.cs	Variables to keep instance of music player alive (no longer necessary now that both search music and the player are within the same view viewmodel
	SongDataService.cs	Db connection functions
