

Philosophy

I did not know what I wanted to do coming out of high school. I took an introductory Computer Science class my first semester of college and was instantly hooked. The ability to create something that does exactly what you thought of is a great feeling. Another great part of Computer Science is that there is never one solution. There are many subjects that force you to solve a problem one exact way, but in Computer Science, no two programmers are alike. You have the ability to choose how you write, organize and execute your code whichever way you want. That freedom to be creative is a factor that excites me in every project I create. Spending hours working on a program and having it execute exactly how you want it to is what makes me happy that I chose this major.

Career Plans (May 12, 2021)

When I graduate from St. Norbert, I will be moving back to Los Angeles, CA. I would like to find an entry-level software engineering job anywhere. I would like to stay there for a couple years to acquire some experience in the field. Then I would like to apply to higher level companies and see where that takes me. I would also like to be a part-time baseball coach, hopefully back at my local high school or community college. Baseball has just been an important part of my life for almost 20 years, so I would like to give back some knowledge and help others.
